WHO I AM

I am an analyst who spent 25 years doing analytical work inside operational roles. Management was not the destination — it was the vehicle the work required. **The analysis was the cause. The management was the consequence.**

The bar I have worked to is not a performance review. It is a formal HR panel. An external audit. A bank's lending committee. The numbers I produce are not for dashboards. They are for decisions — with consequences attached.

I have rarely been the first hire. I am consistently the one called in when the first hire did not deliver — because what the role actually needed was someone who could read the operation, take it apart, and rebuild it the way the data showed it should work.

PROOF OF WORK — EXECUTION EVIDENCE

Five outcomes. Each one the consequence of reading the numbers when others had stopped looking.

Product Line Growth — 2008 Global Financial Crisis

Bronkho Cash and Carry · 2008–2010

CONTEXT	METHOD	EXECUTION	OUTCOME
Global financial crisis. Buying portfolio under pressure. Business contracting.	Analysed portfolio line by line under crisis conditions. Cut non-performing lines. Concentrated depth and promotional activity on confirmed performers. Restructured buying position from intuition to data.	Buying decisions restructured from intuition to data. Lines tracked weekly against market movement.	Portfolio grew above 3% while the broader business contracted.

Store Performance Engine — R16k to R56k per Square Metre

Truworths and Identity · 1998–2007

CONTEXT	METHOD	EXECUTION	OUTCOME
Flagship 1,300m ² store turning over R40m+ per annum. Performance below potential.	Applied analytical method to floor and category performance. Identified drivers and non-performers. Used data to secure additional floor space and a full store revamp from head office.	Model replicated across five stores. Managers trained on metrics-based recruitment, data-driven operations, and daily performance visibility.	Sales density: R16k to R56k per m². 250% improvement. Staff consistently poached — they had been taught to read numbers.

Fraud Ring — 46 Individuals, One Paper Trail

Truworths and Identity · Multiple store locations · Formal disciplinary proceedings

CONTEXT	METHOD	EXECUTION	OUTCOME
Systematic cash refund fraud suspected across multiple store locations. No single data source sufficient to prove it.	Cross-referenced transaction data across locations. Traced paper trail. Built case file to formal HR panel standard — every link documented, every alternative explanation closed before naming individuals.	46 individuals identified across multiple stores. Case file presented to formal HR panel without legal challenge.	46 terminations. Document held. No successful appeals.

Theft Investigation — Flour Diversion, Receiving Manager

Cofimvaba Superspar · Stocktake readiness investigation · Formal HR proceedings

CONTEXT	METHOD	EXECUTION	OUTCOME
Recurring stocktake variance in flour. No obvious explanation. Standard reconciliation not closing the gap.	Cross-referenced five simultaneous data sources: delivery cycles, sales data, stock-on-hand, inter-branch transfers, and bread production volumes. Closed every alternative explanation methodically before naming a cause.	One pallet of flour diverted per delivery truck. Receiving Manager identified as sole point of diversion. Findings report produced to formal HR proceedings standard.	Termination upheld. Findings report held at formal proceedings. Variance closed.

Profitability Dashboard and Refinancing Proposal

WG Mica Hardware · 2020–2025

CONTEXT	METHOD	EXECUTION	OUTCOME
Business operating at unacknowledged structural loss. Ownership unable to identify cause or secure refinancing independently.	Built full profitability dashboard from scratch. Identified structural 12% net loss driven by actual expenses and salary costs exceeding sales returns across a full trading year. Modelled remediation path with scenario analysis.	Presented refinancing proposal to lending institution. Structured the data narrative for a non-financial audience. Ownership had attempted this repeatedly without success.	Proposal accepted on first presentation. Ownership had failed repeatedly. Subsequently terminated.

CAREER HISTORY

Each role carried a management title. Each role was won and held on analytical performance.

Finance and Operations Manager

WG Mica Hardware · 2020–2025 · Queenstown, Eastern Cape

- Built full profitability dashboard from scratch; identified structural 12% net loss; modelled remediation path; produced refinancing proposal accepted by lending institution on first presentation after repeated ownership failures.
- Root-cause traced recurring pricing error through layered data analysis across supplier invoices, POS data, and margin reports; produced written finding with operational remediation steps.
- Managed full AP/AR cycle, GL through to trial balance, year-end close — sole analytical resource with no peer to validate the work.
- Built document control, compliance filing, and process documentation function; produced operational SOPs and filing architecture from scratch.
- Multi-framework compliance management: LRA, BCEA, OHS Act, SARS, and IFRS reporting — simultaneously, without specialist support.

Financial Operations and Insights Lead

Protea Superspar · 2015–2020 · Queenstown, Eastern Cape

- Produced quarterly stocktake readiness findings reports for external accountants and auditors across two branches; multi-source variance data synthesised to financial result publication standard.
- Flour theft investigation: cross-referenced five simultaneous data sources, closed every alternative explanation, identified Receiving Manager. Findings report held at formal HR proceedings. Outcome: termination.
- Built Excel-based KPI dashboards and exception reporting infrastructure; reduced quarterly stocktake reconciliation cycle from one week to same-day.
- SIGMA ERP Super User across POS, back-office, and network systems; trained staff and managed system integrity.
- Vendor and supplier relationship management across multiple supply chains; margin analysis informed all procurement negotiations.

Loss Prevention Analyst and Store Manager

Truworths and Identity · 1998–2007 · Durban and Pietermaritzburg, KZN

- Built data-driven performance model; grew sales density from R16k to R56k per square metre — 250% improvement — in flagship 1,300m² store turning over R40m+ per annum.
- Replicated model across five stores; trained managers on analytical method — metrics in recruitment, data in training, daily performance visibility. Staff consistently poached.

- 46-person cross-store fraud ring broken through paper-trail analysis across multiple locations. 46 terminations. Document held. No successful appeals.
- Deloitte external audit delivered clean in 2006.
- Reduced stock loss from 4% to 1.46% during a security strike — one of the group's best recorded outcomes in that period.
- Qualified SETA Assessor NQF Level 5; developed multiple store managers through structured capability programmes.

Manager and Buyer · Komani Meats and Saverite · 2012–2015

- Built Excel-based demand planning model; every purchasing decision data-led from structured analytical position, not intuition.
- Margin analysis and supplier performance data informed every commercial negotiation; vendor management across multiple supply relationships.

FMCG Buyer · Bronkho Cash and Carry · 2008–2010

- Delivered above 3% growth in buying portfolio during 2008 global financial crisis while broader business contracted.
- Built reporting infrastructure from scratch using Excel; used it to drive all commercial decisions.

INDEPENDENT ANALYTICAL WORK

White Paper: Reigniting the Flame (2026)

Intergenerational Knowledge Transfer as a Circuit Breaker of Poverty · 14 pages · Self-published

- Dataset self-compiled from multiple unaligned international sources across UN, World Bank, UNICEF, ILO, and UNESCO data repositories.
- Data architecture designed and built before the analytical argument — same discipline as the forensic investigations, applied at global scale.
- Root-cause analysis of intergenerational poverty cycles; policy-level recommendations structured for NGO and government audience.

FMCG Demand Planner and Profitability Dashboard · github.com/KeithCoetzee-ZA

- Demand planning model and full profitability dashboard built from scratch. Data architecture first. Insight second. Published in base visual format — the logic is the point.
